Election/Restrictions

1. This office action is in response to the Response to Election of Species Requirement filed November 06, 2003.

Accordingly, Applicant elected species I, claims 1-23, with traverse. However, upon further consideration, the Examiner found that claims 1-23 contains more distinct inventions which need to be further restricted as follows:

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-3 drawn to an electrical circuit board classified in class 174, subclass 255; and claims 8-14 and 19-23 drawn to a bottom-gate TFT array substrate and a liquid crystal device classified in class 349, subclass 43.
- II. Claims 4-7 drawn to a method of fabricating an electrical circuit board classified in class 361, subclass 795; and claims 15-18 drawn to a bottom-gate TFT array substrate, classified in class 438, subclass 30.

The inventions are distinct, each from the other because:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, an electrical circuit board can be made by a different process in which X wiring lines and Y segmented wiring lines are formed by grinding and cutting instead of etching a conductive material film layer. Similarly, a

Application/Control Number: 10/070,554

Art Unit: 2871

bottom-gate TFT array substrate can be made by a different process in which a gate wiring line section pattern and a source segmented wiring line section pattern are formed by grinding and cutting instead of etching a G-S metal film layer.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Group I contains claims directed to the following patentably distinct species of the claimed invention:

IA: claims 1-3 drawn to an electrical circuit board according to first aspect.

IB: claims 8-14 and 19-23 drawn to a bottom-gate TFT array substrate and a liquid crystal display device according to second and third aspects.

If Group I is elected, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims is generic.

Group II contains claims directed to the following patentably distinct species of the claimed invention:

IIA: claims 4-7 drawn to a method of fabricating an electrical circuit board according to first aspect.

IIB: claims 15-18 drawn to a method of fabricating a bottom-gate TFT array substrate and a liquid crystal display device according to second aspect.

Application/Control Number: 10/070,554

Art Unit: 2871

If Group II is elected, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, none of the claims is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2871

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thoi V. Duong whose telephone number is (571) 272-2292. The examiner can normally be reached on Monday-Friday from 8:30 am to 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim, can be reached at (571) 272-2293.
